

9th GOSPEL Workshop. Gas sensors based on semiconducting metal oxides: novel materials & mechanism analyses & application fields

4th-6th August 2024
Changchun, China

CALL FOR ABSTRACT

GOSPEL is an international biennial research meeting dedicated to the R&D activities in the field of semiconducting metal oxide based gas sensors. The aim is to bring together academia and industry and help the latter to identify which of the new developments are the most relevant to it. The main topics of the workshop will be: operando investigations of gas sensing; applications; novel materials/manufacturing technologies.

Attendance at the 9th GOSPEL Workshop is expected to be 150 – 200 participants. For each of the main topics we will have a couple of invited lectures (each with 25 min and 10 min discussion), regular oral contributions (15 min/5 min), and poster presentations. GOSPEL is ready to host an exhibition for companies in sensor application fields and will try to organize a round table addressing the needs of industry.

Workshop Venue

The 9th GOSPEL will be organized by the Jilin University, over two full days – 5th and 6th of August 2024.

The workshop will be held in the South Qianwei Campus of Jilin University.

Information & Contact
